

LN - 6 : CHANGES AROUND US : Key points – 2

1. The iron blade of these tools has a ring in which the wooden handle is fixed.
2. The ring is slightly smaller in size than the wooden handle.
3. To fix the handle, the ring is heated and it becomes slightly larger in size.
4. When the ring **expands** at the time of heating, we can fix the handle into the ring easily.
5. When the ring cools down it **contracts** and fits tightly on to the handle.
